SQL Tables:

DELETE VS TRUNCATE VS DROP

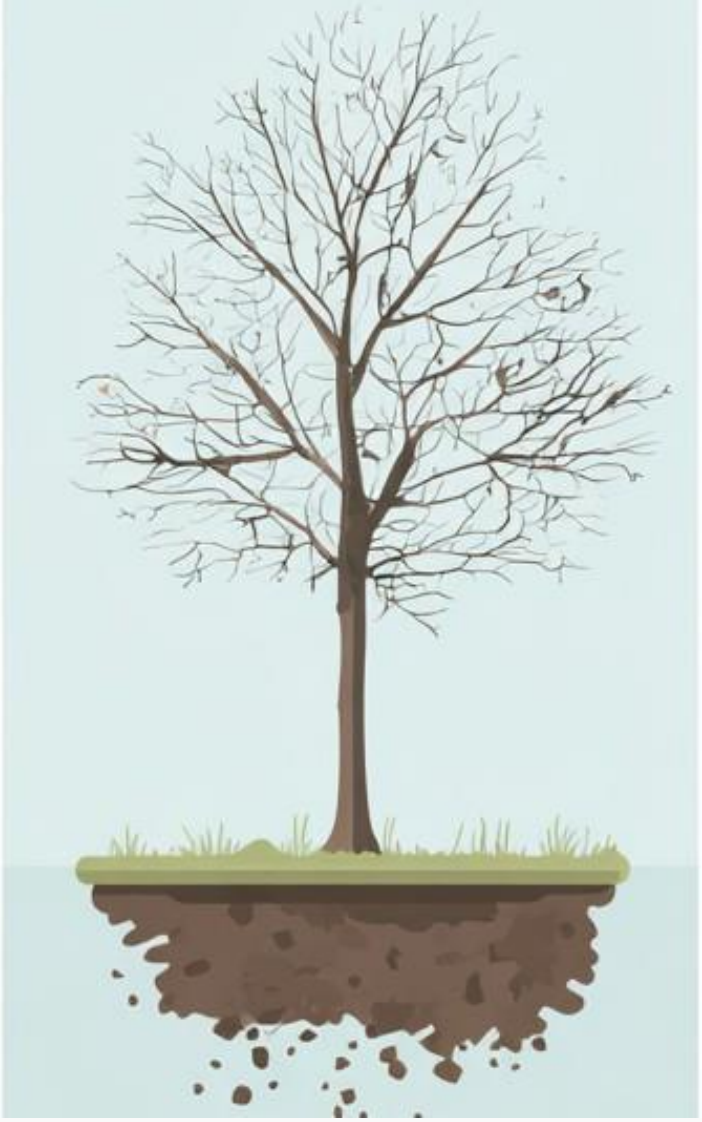

DELETE

- **Removes selected rows (with WHERE)**
- **Keeps table + structure**
- **Slower for large tables**

TRUNCATE

- **Removes all rows**
- **Keeps table structure intact**
- **Resets identity counters**
- **Much faster**

DROP

- **Removes both data + structure**
- **Table is gone completely**
- **Cannot be used afterwards**

Simple rule:

Delete = few rows,

Truncate = all rows,

Drop = table itself
